Alaska Energy Cost Reduction Program
Progress Report

Grantee: Golden Valley Electric Association

Project Name: Parks Highway Electric Line Extensions

Grant # 2195179

Period of Report: November 1st to November 30th, 2004

Project Activities Completed:

Design continued for the second phase of the project. The contract for the first phase was awarded and construction should begin in late December or early January. A contract for additional clearing was awarded and the clearing has begun.

Existing or Potential Problems: There are several native allotments along the route. Our goal is to route the line so that we do not have to acquire easements from these parcels; however, they will be able to receive service in the future if we receive an application.

Activities Targeted for Next Reporting Period:

Continue surveying, line design, easement/permit acquisition and ROW clearing for the second phase and begin construction of the first phase.
